

Golden Iris
Iris innominata

Plant Height: 6 inches

Flower Height: 12 inches

Spread: 15 inches

Spacing: 12 inches

Sunlight: ○ ●

Hardiness Zone: 6b

Other Names: *Iris tenax* ssp. *innominata*

Description:

An uncommon dwarf iris native to the woodlands of the Pacific Northwest, which features a broad range of flower colors ranging from rich gold to deep purple; does best in well-drained moist soils

Ornamental Features

Golden Iris features showy gold flag-like flowers with purple overtones and purple veins at the ends of the stems in early summer. The flowers are excellent for cutting. Its attractive sword-like leaves remain bluish-green in color throughout the year.

Landscape Attributes

Golden Iris is an herbaceous evergreen perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Golden Iris is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Golden Iris will grow to be only 6 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 15 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America. It can be propagated by division.

Golden Iris is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
